For the Mind & Spirit:

Tarot Card Reading

Tarot cards first began as playing cards, and have been used by Kings and Queens. Tarot - just like with any divination tool - tunes into what you are going through. As you shuffle the Tarot cards, your energy is psychically imprinted on them. As you lay the cards down, the placement of each card means something. Depending on what cards come up, they create a story about your present situation. The cards are beautiful and contain many metaphors and messages that speak to the deepest part of your soul.

Tea Leaf Reading

Tasseomancy is the art of reading tea leaves and is strongly associated with the Gypsies and the English. The history of Tasseomancy can be traced back hundreds of years. During a reading the client drinks a cup of tea but leaves a small amount in the bottom of the cup. The cup is turned upside down on a saucer and turned. The reader picks up the cup and reads the patterns formed by the tea leaves. Usually the best tea readers also have natural artistic skills.

Chakra Reading

*May your wisdom radiate
harmony and balance*

Chakras are energy centers in the body that spin and are represented by different colors. Each chakra represents different things that relate to our health, wealth and spiritual evolution. Reading the chakras can give one an accurate picture of what is going on with a particular person energy system and how that might affect their total well being.

Reiki

A Japanese technique that can bring deep relaxation, ease pain, reduce anxiety and accelerate healing.

Angel Reading

Angel readings can be life changing. They will help you with personal, emotional and spiritual growth and help you to deal with the challenges life continually presents. When you know who to call on and how they can help you, this spiritual support system can be reassuring. Angels want to help us live our life to its full potential.

Astrology Reading

Find out about your life plan, soul strengths, talents, and insights into your character via an astrological interpretation of your birth sign.

Lipstick Reading

Choosing a color lipstick and kissing a napkin, the reader can pick up information about your personality.

Palmistry

The study of the lines and signs of the hands has been around since the stone ages. The practice of reading one's palm has been found in the bible, vedic scripts and early semitic writings and was studied as a means to unveil and understand the self and relationships with others. The majority of hands will have the four major lines, the fate, life, heart and head line.

Numerology

The beginnings of numerology date back over 10,000 years to Egypt and Babylonia. Pythagoras is credited with formally organizing the field of numerology approximately 1600 years ago in ancient Greece. By applying simple mathematical formulas to the numbers representing a person's name and birth date, a numerologist can derive four major core elements and some twenty + modifiers. A symbolic evaluation of these elements provides a remarkably complete and accurate character analysis.

Handwriting Analysis

Handwriting analysis is a method of identifying, evaluating, and understanding a person's personality through the patterns revealed by his handwriting. Whether you mind your "p"s and "q"s and dot your "i" and cross your "t"s can say a lot about how you think and behave.
